11.            };
12.        });
```

Output

Here I made a card maker website which generate a card from the personal information given by the user. It will update the information on the spot as we used the concept of angularJS.

First output is the output where the first page is displayed and user hasn't given any input.

Second output is the output where the user has given output and the card is generated based on the information given by the user in realtime.

Before input :

The screenshot shows a web browser window with a single tab titled "Practical 7". The address bar displays the file path: `/Users/aayush/Documents/sem%204/Web%20...`. The page content is divided into two main sections: "INPUT" and "OUTPUT".

INPUT

The input section contains a black rectangular box with five white input fields, each preceded by a label and a colon:

- Name :
- Age :
- Weight :
- Height :
- Skills :

OUTPUT

The output section contains a black rectangular box. On the left side of this box is a white line-art drawing of a person's head and shoulders. To the right of the drawing, the word "Hero" is displayed in pink. Below "Hero", the labels "Age", "kg", and "cm" are aligned horizontally. Underneath these labels, the words "Weight" and "Height" are displayed, with "Weight" positioned under "kg" and "Height" positioned under "cm".

After input :

Practical 7

File | /Users/aayush/Documents/sem%204/Web%20... ☆

INPUT

Name : Saitama

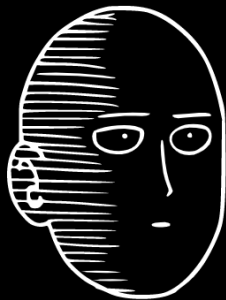

Age : 25

Weight : 70

Height : 175

Skills : Immeasurable Strength and Enhanced Leap, Immeasur:

OUTPUT

Saitama
Hero

25	70 kg	175 cm
Age	Weight	Height

Immeasurable Strength and
Enhanced Leap,
Immeasurable Speed &
Reflexes.

Conclusion

Here we have learned many angularJS concepts like Expressions, Data-binding, Directives and Controllers. With the use of this concept I created Personal information card generator websites which updates in real-time as user gives input.

- *Concepts and their definitions:*

- **Data Binding** *Data binding in AngularJS is the synchronization between the model and the view.*
- **Expression** *AngularJS binds data to HTML using Expressions.*
- **Directives** *AngularJS lets you extend HTML with new attributes called Directives. AngularJS has a set of built-in directives which offers functionality to your applications. AngularJS also lets you define your own directives.*
- **Controllers** *AngularJS controllers control the data of AngularJS applications. AngularJS controllers are regular JavaScript Objects.*
