Practical 8

Design a shopping website using CSS that provides information about various products to the visitor. A visitor can register to the shopping website if he wishes to purchase some item(s) now or in future. The registration form should collect necessary information of a visitor in order to deliver the product if order placed. Moreover, design a web page to place orders by the registered user. Validate all the fields of the registration form and order form.

Here I created three folders :

1. **Registration and login form** : which contains registration and login webpage's codes.
2. **sample1** : which contains shopping webpage and cart webpage's codes.
3. **Thank you** : which contains thank for shopping webpage code.

Every folder contains its corresponding codes. Every folder has its own sub-folders like images, css and script. Which will contain respective files.

Note: As these codes are too big, I have uploaded it in my Github account in organised way.

You can refer it from this link: <https://github.com/Shah-Aayush/Ecommerce-website>

You can also see the live demo of the website with this link : <https://fashionfeet-ecommerce-website.web.app/>

FOLDER : Registration and login form

Output

Although I included output screenshots herewith but still I recommend you to visit the actual website as there are so many things which will not be effectively seen in the screenshots.

Live demo of website :

https://fashionfeet-ecommerce-website.web.app/registration_form-login_form/index.html

Some snapshots of website :

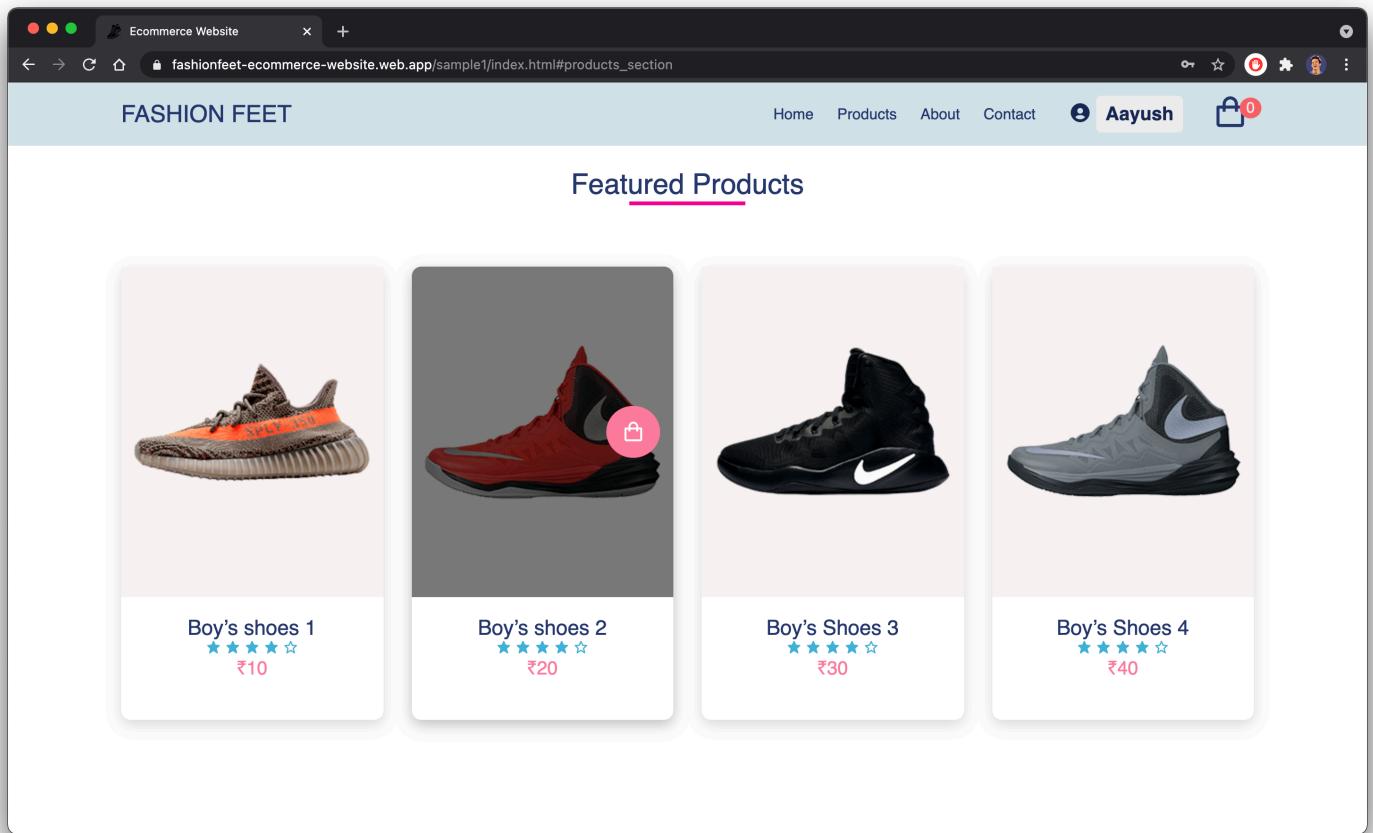

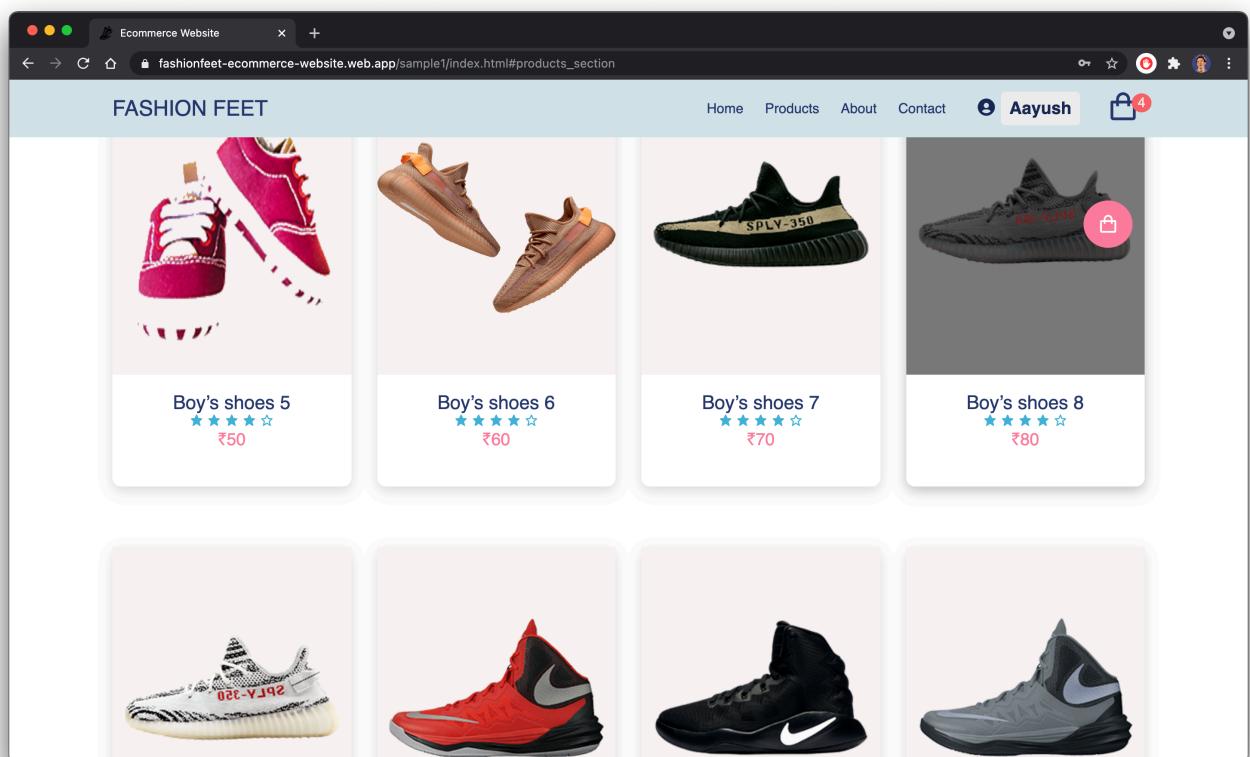

The screenshot shows the 'products_section' of the website. The layout is similar to the homepage, with a navigation bar at the top. The main content area displays three categories of shoes in separate boxes: 'Sports shoes' (pink background), 'Athletic Shoes' (light blue background), and 'Army Shoes' (yellow background). Each box contains an image of the respective shoe type and descriptive text.

Category	Image	Description
Sports shoes		World's Best Brands
Athletic Shoes		Hot Favourites
Army Shoes		Top Class

Featured Products

Four small, light gray rectangular boxes are visible at the bottom, likely placeholders for more product cards.

On mouse hover on any product :**After purchasing some product, see cart items :**

This is the fight of our lives and we're going to win. Whatever it takes. I'm just a kid from Brooklyn.

The price of freedom is high, it always has been. And it's a price I'm willing to pay.

I'm not looking for forgiveness, and I'm way past asking for permission. I can do this all day!

Conclusion

Here we have learned many angularJS concepts and other temporary storage options like session storage.

I have build this whole website with the use of html, css, javascript and Angularjs.

Many new concepts of Angularjs are learnt by me while making this practical like array in Angularjs, loops and condition, function in angularJS and got practical knowledge of different ng-directives.
