Nirma University Institute of Technology B. Tech. (CSE), Semester IV 2MA402 - Probability and Statistics Class Test – February 2021

Time: 1 Hours 15 Min. Max. Marks: 35

Instructions:

1. Attempt all questions.

2. Figures to the right indicate full marks.

Q.1 CO2,L3

- A) A man is known to speak truth 3 out of 4 times. He throws (08) a fair die and reports that it is a six. Find the probability that it is actually a six.
- B) A company has two plants to manufacture bikes. Plant A manufactures 70% of the bikes and plant B manufactures 30%. At plant A, 80% of the bikes are rated as of standard quality and at plant B, 90% of the bikes are rated as of standard quality. A bike is chosen at random and is found to be of standard quality. What is the probability that it has come from plant B?
- Q.2 In a certain factory turning out razor blades, there is a small (08) CO2,L5 chance of 0.002 for any blade to be defective. The blades are supplied in packets of 10. Calculate the approximate number of packets containing
 - i) two defective blades
 - ii) at least two defective

in a consignment of 10,000 packets.

- Q.3 Assuming that the diameters of 1000 brass plugs taken (08 CO1,L3 consecutively from a machine from a normal distribution with mean 0.7515 cm and standard deviation 0.002 cm. Find the number of plugs likely to be rejected if the approved diameter is 0.752 ± 0.004 cm.
- Q.4 A) Probability of man hitting a target is $\frac{1}{3}$. If he fires so that the CO2,L3 probability of his hitting target at least once is greater than $\frac{3}{4}$, find n.
 - B) A student takes a true-false examination consisting of 8 questions. He guesses each answer. The guesses are made at random. Find the smallest value of n so that the probability of guessing at least n correct answer is less than $\frac{1}{2}$.

Q.5 CO2,L5

For follo	For following discrete probability distribution								
х	0	1	2	3	4	5	6	7	
f	0	k	2k	2k	3k	k^2	$2k^2$	$7k^2 + k$	

Determine: i) k ii) Variance

Areas Under the One-Tailed Standard Normal Curve

This table provides the area between the mean and some Z score. For example, when Z score = 1.45 the area = 0.4265.

							μ=0	1.45
